EXECUTIVE SUMMARY

Rey Finance is a decentralized all-in-one ecosystem on the Binance blockchain which will bridge with Ethereum. Both are the fastest-growing and safest blockchain protocols. Our team developed the community-driven project. We aim to take cryptocurrency to new heights and to provide all facilities under a single platform. Rey Finance will be a whole ecosystem that will provide features such as Staking, an NFT Marketplace, Rewards, Multiple Blockchains in the future, Lending/Borrowing and NFT staking under such a single platform. Rey Finance will develop its own unique NFT marketplace and its own wallet that will financially connect the decentralized community.

The main value proposition for investors in Rey Finance is exposure to a new brand of the community-funded crypto movement. By becoming a part of the Rey Finance community, investors are joining a revolution that is primarily motivated by the spreading of goodwill and execution of common goals between like-minded individuals.

INTRODUCTION

Rey Finance is an all-in-one decentralized cryptocurrency platform for the modern world. It is based on the Binance blockchain and will bridge with Ethereum. Ultimately, we will launch our own sovereign blockchain. Rey Finance has been designed as a high-performance multi-service platform. Rey Finance will be powered by community governance, which authorizes the community to deliver trustworthy projects.

Rey Finance will be a whole ecosystem that will launch its apps for Staking, an NFT Marketplace and farming along with their own wallet. Rey Finance will develop its own unique NFT marketplace that will connect to Decentraland, where NFT holders may buy and sell their NFTs. The NFT marketplace will be linked to our NFT staking app, allowing holders to stake NFTs as they are shown on the Decentraland marketplace. There will be a charge for displaying NFTs as well as a fee for each sale. People will now be able to own exclusive rights on unique themes, characters, videos, music and much more.

Staking will allow users to earn yield in the form of a REY Token. We are revolutionizing the market with a more open, accessible and fair global financial system with decentralized Binance-powered crypto swapping. Unlike other conventional platforms, our wallet allows investors to generate more value for users' crypto-assets.

Rey Finance will launch a lending platform that accepts REY tokens as collateral and provides 50% worth of BUSD/USDT as a loan.

Rey Finance will also launch its coin, REY, which will be our native token. We intend to build on top of Decentraland and launch our own virtual real estate. You can complete all your dreams in real and become financially strong.

VISION

We aspire to put “cryptocurrency in every portfolio”. We envision a world where wealth-building strategies that were once only accessible to affluent individuals become available to everyone, transferring power over our financial systems back to the people. Rey Finance will create a revolutionary ecosystem to bring more people into digital assets and helping them earn a passive income through redistribution/reflection. We will achieve this by holding the token long-term, along with maintaining their privacy, security, and autonomy alongside digital and social issues. We strive to create an ecosystem based on sound monetary policies, with a sound and solid decentralized foundation that should be expected with the Rey Finance digital asset.

OUR MISSION

Rey Finance is a blockchain-based decentralized finance platform with the goal of creating a community-driven ecosystem that empowers holders to improve their financial situation.

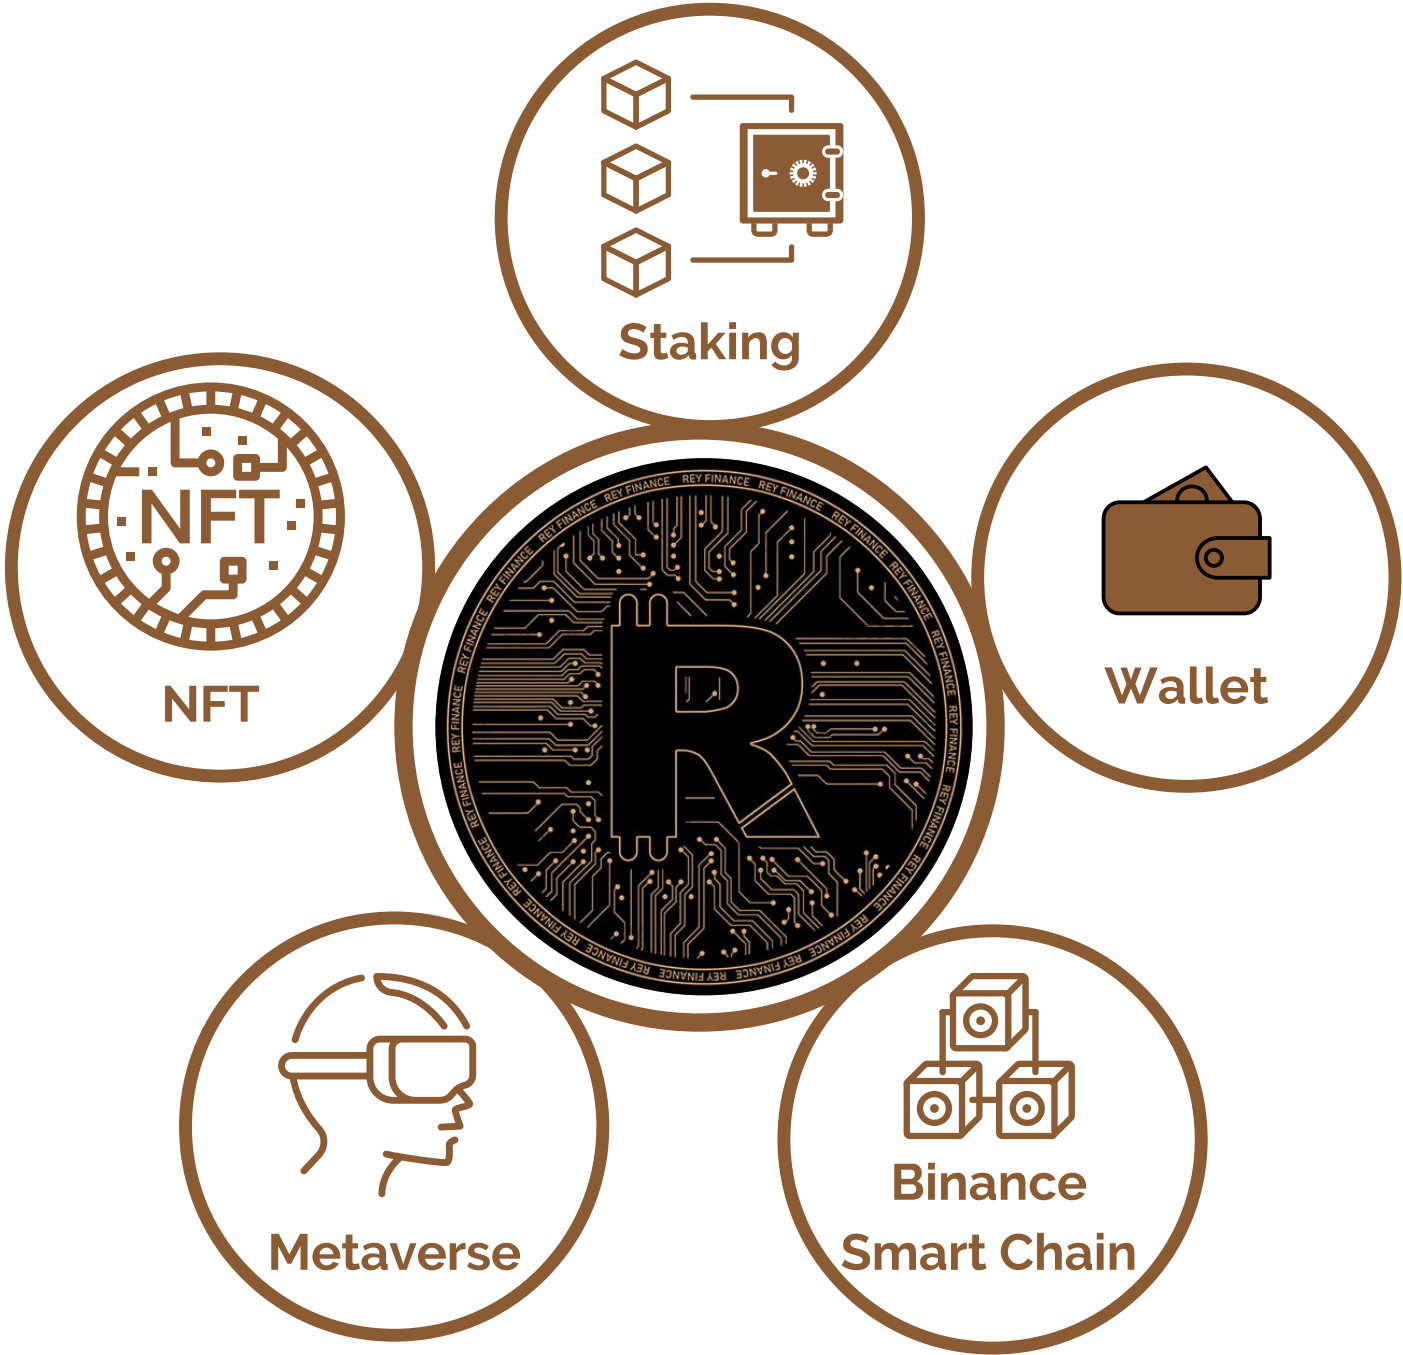

Our objective is to:

- Provide easy and effective solutions for all holders to obtain exposure to digital assets.
- Reduce the entrance barrier into a more complex financial environment.
- Operate as a truly decentralized, community-focused, and community-driven digital asset.
- Reduce volatility and promote positive price pressure in digital asset while staking.
- Our goal is to help people gain confidence in exploring the blockchain world, which will lead to more crypto acceptance.

BUSINESS MODEL

OUR CORE VALUES

Community

The Rey Finance ecosystem's most valuable asset is its community. We wondered at first if a project could flourish based on a decentralized, community effort. Due to the power of its community members and investors, Rey Finance was able to become a cornerstone in market.

Utility

In the crypto realm, we believe that utility is the cornerstone of value. The Rey Finance platform was established with the belief that the crypto sector is severely underutilized. We believe that utility will drive crypto adoption and growth and that Rey Finance will be the crypto ecosystem that people adopt due to its utility-focused nature.

Inclusivity

At Rey Finance, we put inclusivity at the center of our purpose. We think that wealth creation should be accessible to everyone, regardless of color, gender, or religion. Unfortunately, not everyone has money to invest.

Interconnectivity

Simply said, every component of a system interacts with and is reliant on the others. Rey Finance believes in building a linked system of mutual trust and trustworthiness.

REY FINANCE STAKING

Rey Finance works on the Binance Blockchain, which is eco-friendly and works on a proof of stake. In addition to being the one of the largest crypto exchanges by trading volume, it offers exemplary staking services. By utilizing comprehensive security methods and offering a secure asset fund for users, Rey Finance assures that a user's money is protected (SAFU). At the time of writing, our staking technique is undoubtedly one of the safest and most environmentally friendly ways to make passive income. The platform uses a secure wallet and a double-checking method to hold all staked tokens.

The staking contract is written in a way that prevents inflation. When more and more people stake REY, the contract will automatically reduce the coins it gives.

As more people, especially institutional investors, recognize the crypto market's profitability and efficiency, staking gradually becomes a method of obtaining passive income by simply staking or locking funds in a wallet.

Since holding cryptocurrencies necessitates certain technological crypto know-how and compliance criteria, Rey Finance staking platforms are useful for allowing investors, including those lacking technical knowledge of cryptocurrencies, to hold proof of stake (PoS) tokens and receive rewards. In response to the tremendous increase in crypto staking, staking platforms that allow investors to receive staking incentives have sprung up. If you are interested in earning a passive income by staking, this is the place to be.

BENEFITS OF STAKING

NO HARDWARE IS REQUIRED

Unlike proof of work, there is no need for specific equipment or hardware for cryptoholding. This is proof that staking works without the need for any special equipment. The only requirement is to stake the TOKENS for an interval of time by the holders on any exchange or dapp.

SCALABILITY

Scalability is a term that is frequently used in the Blockchain ecosystem. It refers to a computational process's potential that is used to generate in a variety of ways. Proof of stake protocols, as shown by Rey Finance in higher transaction outputs and lower fees, makes for greater scalability.

MORE COST-EFFECTIVE

Proof of stake blockchains are usually low-cost and low-energy systems that don't require any special or expensive hardware. PoS is less expensive and less harmful to the environment than proof-of-work chains. Stackers can earn more passive income by using the Rey Finance platform.

PASSIVE INCOME

Stakeholders earn incentives by Staking and controlling their digital wealth. The incentive for keeping is passive income for the recipient.

ECO-FRIENDLIER

One of the major benefits of the staking token is that it does not need a continuous supply of energy to validate the transaction. As a result, it is environmentally friendly.

SECURED BY SMART CONTRACT

The biggest issue in the modern world is security and privacy and Rey Finance provides a swift and stable portal that is backed by the Rey Finance ecosystem, making it superior to others. Rey Finance is offering a highly secure and fast platform to users for holding crypto.

REY FINANCE NFT

Rey FinanceNFT is a vital part of our ecosystem that deals with NFTs. Rey Finance is a company that specializes in providing financial non-fungible tokens (NFTs) that are one-of-a-kind, non-transferable assets created on the blockchain. These will be linked to anything from digital Rey Finance. The key characteristics of Rey Finance NFTs distinguishes them from other forms of assets and gives them a distinct value. These characteristics include verifiable uniqueness and authenticity. The scarcity and ownership of any particular token may be ascertained without the requirement of a trusted middleman since the underlying code is visible.

We will launch our NFT marketplace and it will be connected with Decentraland. The advent of NFTs, in our opinion, is part of a larger paradigm shift away from centralized to decentralized systems. This platform is now allowing developers of digital items to experiment with new revenue strategies. Rey Finance is a widely known NFT project. Each Rey Finance underlying token encodes a unique genome that defines its appearance, traits and hereditary lineage. Rey Finance cannot be replicated and cannot be transferred without the user's permission.

REY FINANCE NFT

Rey Finance is a company that specializes in providing financial NFTs that are one-of-a-kind, transferable assets based on the blockchain. By distributing the NFTs, they become part of a bigger paradigm shift away from centralized to decentralized systems, in our perspective. The first collection will consist of a series of cards with different heroes with varying levels of difficulty (1 to 5). Stakers will receive a higher APY from both the staking and lending dapps. Stakers who have five, level one cards will receive the same benefits after combining them as those who have only one, level two card.

NFT holders will need level 2 or level 3 or above if they want a higher percent APY. Stakeholders will require 5 cards of the same level to upgrade from one level to the next, which they will combine through a contract. The contract will automatically erase the 5 cards and replace them with a card of a higher level. As a result, a smaller supply means a higher card price. So, for a level 5 card, you'll need 5 level 1 + 5 level 2 + 5 level 3 + 5 level 4, burning 20 cards in the process.

Stakers will be able to stake the second NFT series, allowing them to earn an income from their NFT. The second series will be based on rarity. As a result, a common NFT has a lower stakable value than a rare NFT. Rey Finance will offer a decentralized marketplace where NFT holders may buy and sell their NFTs. The NFT marketplace will be linked to our NFT staking app, allowing holders to stake NFTs as they are shown on the Decentraland marketplace. There will be a charge for displaying NFTs in Decentraland as well as a fee for each sale.

Our NFT holders will get the following rewards. Some of the advantages of Rey Finance NFT include:

Ownership Rights

Non-fungible tokens have a major benefit in that they may be used to verify ownership. Because they operate on a blockchain network, NFTs can help to bind ownership to a single account.

Authenticity

Non-fungible tokens' benefits are mostly defined by their scarcity. The blockchain is used to construct NFTs, which implies they are linked to one-of-a-kind data. NFTs' unique characteristics demonstrate their capacity to add value. Simultaneously, NFT makers can release a limited quantity of NFTs in order to generate supply scarcity.

Fraud proof

They're simple to transmit and aren't harmed by fraud.

GLOBAL NFT MARKETPLACE

According to a recent estimate from blockchain analytics firm Chainalysis Inc., about \$41 billion worth of crypto was connected with smart contracts related with NFT markets and collections from the beginning of 2021 until mid-December.

Last year, the popularity of non-fungible tokens (NFTs) skyrocketed, with multimillion-dollar sales and celebrities like musician Shawn Mendes, socialite Paris Hilton and former first lady Melania Trump getting on board.

The NFT market is predicted to expand at least 33% annually, reaching \$80 billion in net sales volume by 2025 and almost \$350 billion by 2030. Though this may appear to be a large amount, we are convinced that the market's real growth will much exceed the investment Jefferies' forecasts.

REY FINANCE WALLET

The Rey Finance wallet places a high premium on enabling users to manage their tokens and, more specifically, to integrate subtly with the ecosystem. They can check their balance and send and receive tokens.

The wallet provides users with access to decentralized exchanges, allowing them to swiftly and effectively convert their tokens. The Rey Finance Wallet is instantaneous, secure, and will typically have a cheaper transaction fee than others. Users can primarily use their wallet to give and secretly vote for the organization. A user can stake, hold, and trade using the Rey Finance Wallet, which demonstrates that the Rey Finance Wallet is, for the most part, a wallet that supports a large number of chains.

Extremely secure, it's simply a matter of keeping your key secret and demonstrating how the balance can be checked and tokens can be subtly given and received. It allows for quick cross-border transactions, demonstrating how the wallet's private keys are kept on the user's device and are protected invisibly by secure enclave and biometric authentication technologies. These are barrier-free, as there are no middlemen involved, showcasing how the wallet connects users to decentralized exchanges, allowing them to quickly convert their tokens in a meaningful way.

Key Features

- Dashboard with deposit/withdrawal charts
- Fully responsive and dynamic design
- Dashboard history chart
- Real time charts
- Deposit
- Withdrawals
- Wallet activity transaction
- Generate wallet address
- User profile
- Secured withdrawal using queue
- All files are well commented
- Good documentation
- Free updates
- Customer support

VIRTUAL APARTMENTS & REY FINANCE

Our Metaverse ecosystem is built around the concept of an apartment, which allows anybody of legal age to buy, sell, or rent out their apartment. Anyone who wants to come to your residence must pay a price.

Our ecosystem is being built in a virtual environment where everyone will be a part of it and everyone will be able to participate in their own way. All transactions will be done in REY and if someone doesn't have enough money to buy an apartment, they can buy a room and then trade it for an apartment when they have enough rooms.

Our ecosystem is a community built on the buy/hold and gain ideas, allowing users to grow and earn incentives while earning passive income. Each user will have the opportunity to build and earn while managing his or her own digital assets.

There will be a virtual item buying and selling sector, as well as an advertisement sector where investors may invest and holders can sell their NFT assets to others through the linked exchange. There will also be land purchasing and selling. In addition to this, there are activities such as farming and lending your land to produce passive income.

GLOBAL VIRTUAL INDUSTRY

- In 2021, the worldwide augmented reality (AR), virtual reality (VR), and mixed reality (MR) industry was worth 30.7 billion dollars. By 2024, it is expected to be worth close to 300 billion dollars.
- Over the projection period of 2021 to 2024, the virtual reality (VR) market is expected to increase at a CAGR of over 48.7%. Because of the COVID-19 epidemic, many people are forced to work remotely, and the way businesses collaborate is rapidly changing. This is expected to boost the virtual reality business.
- VR applications are extensively used by consumers for a variety of reasons, including the automotive, gaming, media and entertainment sectors. Virtual reality's rise is being aided by the newest consumer electronics technology, which is being used in a variety of applications. For example, virtual reality gaming with high quality, amazing visuals, and motion with high-end audio is gaining in popularity.

LENDING/ BORROWING

Rey Finance is a lending platform that accepts REY tokens as collateral and provides 50% worth of BUSD/USDT as a loan. The goal of Rey Finance Loan Technology is to create isolated lending markets that enable customers to alter their risk tolerance based on the collateral that they choose.

Rey Finance lends money to borrowers and a specific amount of interest is charged. The lender will receive this as an incentive. To be more specific, lenders profit from interest, while borrowers may obtain loans fast and discreetly without the need for personal contact.

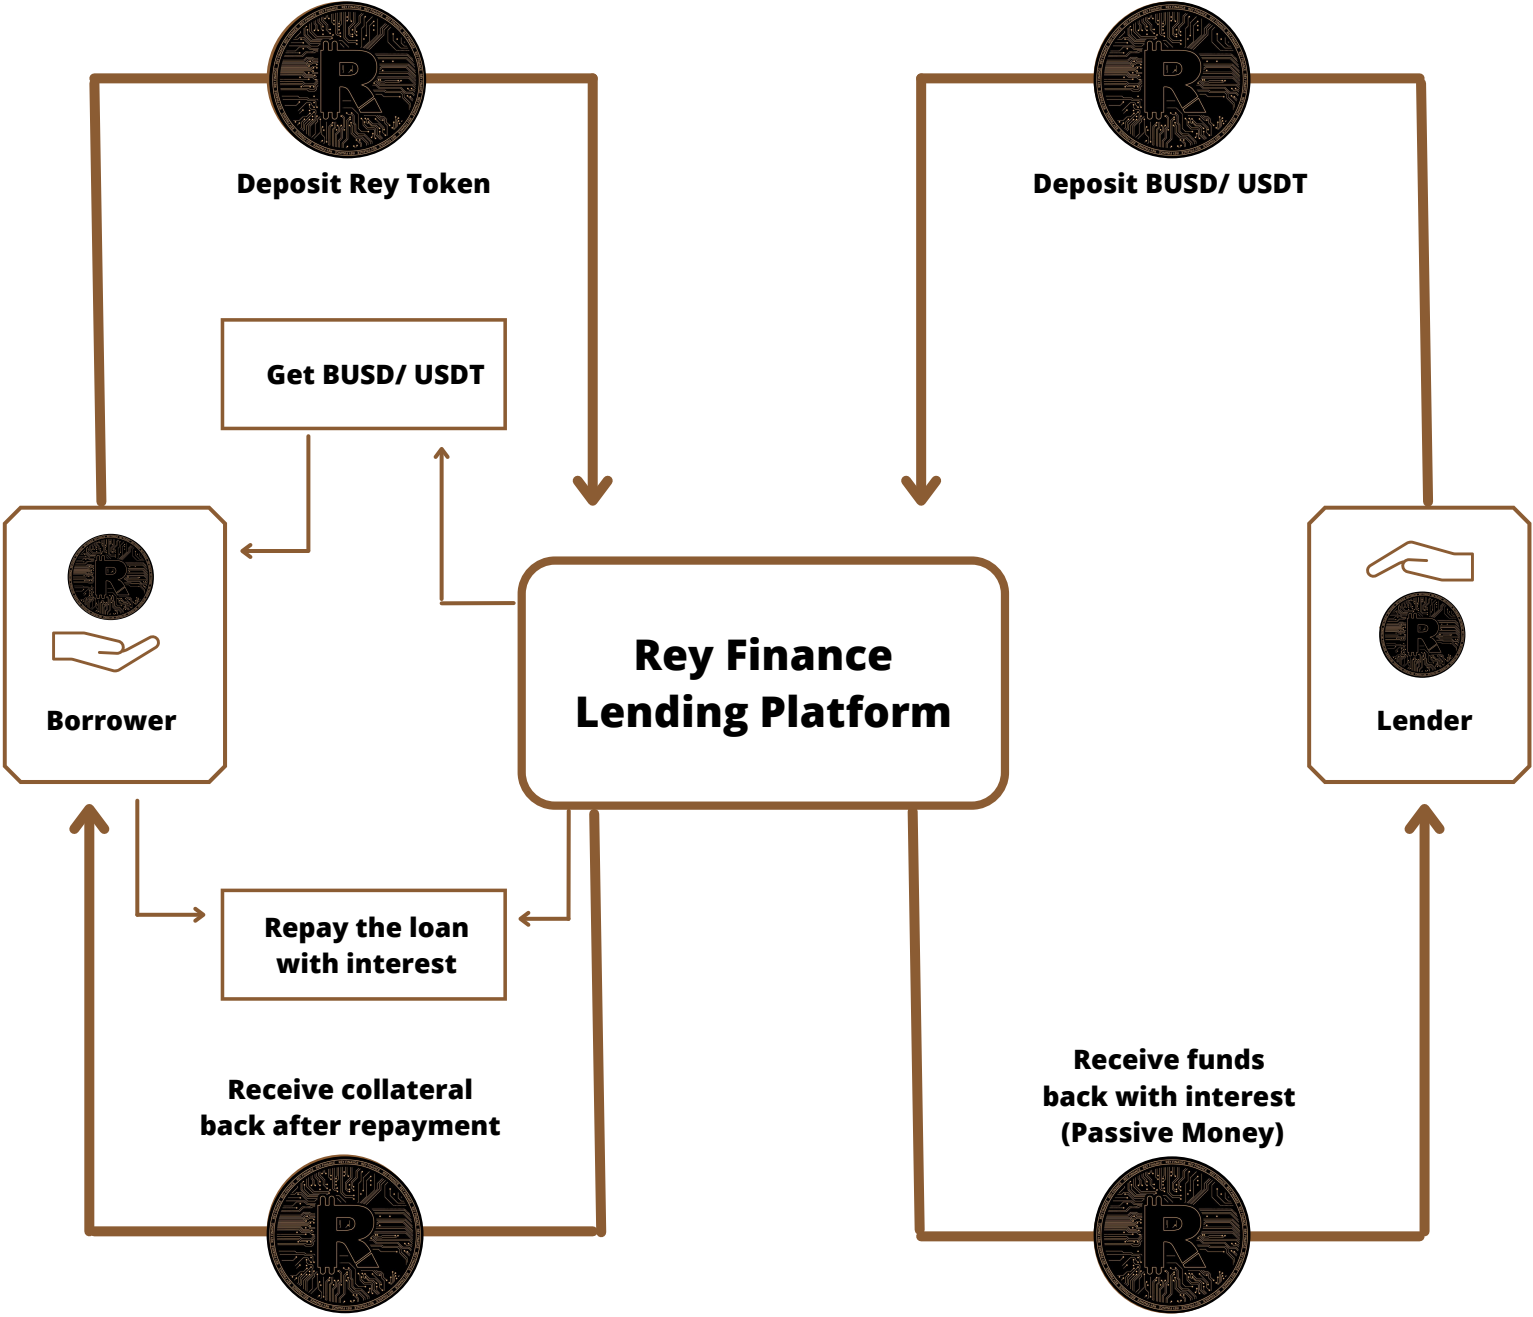

Rey Finance Lending is more suitable for users who prefer low-risk investments and pursue stable returns. It means that lending is a perfect match for holders who can keep tokens and earn extra profit.

It is also straight forward to use for new crypto investors, who may lend crypto assets to generate passive income with only a few clicks. We all know that all types of investment come with risks, but relatively speaking, Rey Finance Crypto Lending is a low-risk product. You might be concerned: what if the person who borrowed my cryptocurrency refuses to repay it? Borrowing on the platform requires collateral, which ensures that the lenders can get the principal and the interest in full. When the borrower pays back his loan with interest, he will get his collateral token.

Users of decentralized lending services can apply for a loan of any amount without having to verify their identity with a third party. To acquire a loan, all you need is the REY token in your wallet as collateral.

LENDING/ BORROWING

FARMING

“Yield farming” is a reward scheme that has taken hold in the crypto world. If you want to compare it to traditional investing, it's like the yield on a bond or a dividend. Like a traditional dividend-paying stock or bond, the yield on DeFi tokens fluctuates depending on how these projects and exchanges roll them out. Anyone who is a part of a Rey token account can easily do it. Yield Farms allow users to earn REY while supporting Rey Finance by staking LP Tokens.

Yield farming credit markets are offering new strategies for crypto owners to earn incredibly attractive returns on their cryptocurrency, at least a hundred times higher than a traditional bank would offer. Yield farming also offers higher profits than almost any other traditional investment channel, from real estate to stocks and bonds. They receive tokens from the company borrowing their funds, in addition to the high interest on their loan.

REY FINANCE COMMUNITY

The ultimate goal of Rey Finance is to become a Rey Finance Community, with platform users having total decision-making authority.

Rey Finance, which will be distributed to the network's active users, will function as a governance tool, letting collectors and producers vote on various upgrades and choose how the platform should progress. As a result, the platform's governance is directly responsive to our most active users, pushing Rey Finance closer to becoming a public good controlled by those who value it most.

We plan to establish a Rey Finance Community to decentralize power and distribute it to the community. Contributors, administrators, moderators, volunteers, and developers will all be working toward the same objective as a result of this.

The Rey Finance Community framework will feature the following:

Holders of Rey Finance ecosystem governance tokens now have the ability to submit "proposals." The proposals are then voted on by the community.

The status of a proposal will change to "executed" once it has been voted on and passed by the community. If a plan fails to pass, its status will be changed to "defeated."

It guides the decision-making process among ecosystem stakeholders. Our goal at Rey Finance is to disrupt traditional governance frameworks of all kinds in order to question how we think about governance.

HOW OUR COMMUNITY WORKS?

At Rey Finance Community, our objective is to create a financial infrastructure that is constructed by as well as for the people. To get there, we intend to decentralize the smart contract base protocol completely, removing the single point of failure (our team) and creating an unbreakable, open protocol that can evolve in new directions.

Today, we're announcing a governance structure that will replace administrator protocols with community governance, allowing you to propose, discuss and implement changes to the Rey Finance ecosystem without depending on, or needing our team.

Anyone with a Rey Finance address can propose a governance action. This can be simple or complex, such as adding support for a new asset, changing the collateral factor for an asset, changing the interest rate model for a market, or changing any other protocol parameter or variable that the current administrator can change.

Proposals are an executable code, not suggestions for a team or foundation to implement. All proposals are subject to a voting period, during which any address having voting power can vote for or against the plan.

We hope that Rey Finance can set the benchmark for how governance tokens should function, empower community governance and set the bar for how governance tokens should work. Until the decentralization process is finished, Rey Finance will be unavailable to the general public.

HOW REY FINANCE CREATES VALUE?

Rey Finance is less risky than tokens like Bitcoin, and dollar-pegged stable currencies have become a popular cryptocurrency option. Consumers may transact with confidence knowing that their purchasing power will be the same today as it will be tomorrow if they use stable coinage. The dollar is managed by the US government. If the dollar declines in value, stable coins will lose value.

Rey Finance is a company that specializes in providing financial community. It intends to address this problem by releasing Rey Finance, which is a free-floating reserve currency backed by a portfolio of assets. The Rey Finance currency is backed by a token treasury managed by the community. The community buys assets from investors and substitutes them with Rey Finance (which is subsequently placed in the treasury).

Here, we'll go through how this community works in further depth.

Rey Finance allows the owner to delegate voting rights to whatever address they choose, including their wallet, another user, an application, or a DeFi expert, in addition to being backed by commodities, gold, or cryptocurrencies. By becoming a member, anybody may participate in the governance of Rey Finance.

In addition to being a treasury-backed reserve currency, Rey Finance is used to govern the decentralized community system. Nobody owns, controls, or decides what happens in the Rey Finance Ecosystem.

Although we've gone over the mechanics of Rey Finance and the cycle that has driven its early success, there are a few scenarios and metrics to keep an eye on.

Rate of return of staking Rey Finance:

The community may consider altering its investment strategy in the future to ensure that its treasury assets generate a certain rate of return. Rey Finance has proposed new yield-earning tactics in order to maintain the rate of return.

Types of Treasury Assets:

There are practical issues when it comes to determining the types of assets to be included in the Rey Finance treasury. NFT, Lending/Borrowing, and other virtual real estate-backed tokens are the foundation of the system.

BURNING

Burns can be critical at times, but they aren't always. A continuous burn on a single protocol may be practical in the early days, but it means that the burn cannot be controlled or limited in any way. Burns that are controlled by the team and elevated depending on achievements help to keep the community updated and rewarded.

The buy-back and burn's circumstances and proportions will be monitored. Rey Finance seeks to carry out a long-term burn plan that is both beneficial and enjoyable for those who take part. Additionally, manual burns help to reward and enlighten the community. The circumstances and volumes of the manual burn are made public and monitored. Our website readout now displays burns, allowing for greater transparency in assessing the current circulating supply at any given time.

TOKEN UTILITY

Unlike conventional for-profit companies, where owners reap more of the monetary gain and frequently aim to maximize income to the detriment of their users, the Rey Finance ecosystem is built by and for the community. Each community member is actually charged in the form of Rey tokens for the value that they bring to the network inside the Rey Finance ecosystem.

The following explains the usefulness of Rey Finance for members of the network.

Token Utility USERS:

- **Staking Rewards:** Receive REY token as a reward for users based upon the value of the token staked.
- **Lend your token:** You can lend your token to earn passive income.
- **Borrow BUSD/ USDT:** You can borrow BUSD/ USDT by providing your REY token as collateral.
- **Exchange:** REY token is a multi-blockchain token so our token will be converted into desired crypto as well as it will be used in all throughout the Rey Finance supporting ecosystem.

HOW TO BUY?

Rey Finance will conduct presales through our Presale dapp, but the public listing will be on PancakeSwap. Our goal is to further expand and quickly achieve the milestones highlighted in the roadmap as our team seeks to eventually have Rey Finance be tradable on an ever-growing list of various exchange platforms. We will continuously update the Rey Finance community on our marketing platforms every time we are added to a new exchange, so keep a keen eye out for future expansion.

1. Create MetaMask Wallet

Create a MetaMask Wallet, TrustWallet, or use an existing wallet. You can create a MetaMask Wallet using either a desktop computer or an iOS/Android mobile device. This will allow you to buy, sell, send, and receive Rey Finance.

2. Send BNB to your Wallet

You can directly buy BNB on [Binance.com](https://www.binance.com) and transfer it over to your MetaMask Wallet by adding the Smart Chain network to your existing wallet. You can also purchase Ethereum (ETH) or a multitude of other tokens and swap them for BNB. Reminder to make sure to use the BEP-20 network when transferring over BNB.

3. Connect Wallet to Presale dapp

Connect your wallet to PinkSales by clicking "Connect Wallet". After connection, locate the Trade tab and change the receiving tokens to Rey Finance by pressing "Select a Token" and entering our token contract address.

4. Swap BNB for Rey Finance

You can start swapping for as many tokens you wish as soon as you have BNB available in your Wallet. Reminder to adjust slippage tolerance to 10-12% before swapping.

WHY CHOOSE REY FINANCE?

Transparency & Immutability

Each time a token trade is recorded on the blockchain using Rey Finance, an audit trail is provided to track where the token originated. This can assist not only with security and fraud prevention in exchange-related firms but also with verifying the legitimacy of the exchanged assets.

Lower Fees and Security

Fees linked with Rey Finance transactions are significantly lower than those related with debit, credit, wire transfers, and BACS payments.

Transaction Traceability

Because each new transaction is encrypted and connected to the prior transaction, Rey Finance is significantly more secure than conventional record-keeping systems. Rey Finance is made up of a complex string of mathematical numbers that cannot be changed.

Ease of use

Rey Finance is more valuable due to its ease of usage. All you need is a smartphone and access to the internet. By becoming a part of Rey Finance, investors may quickly receive rewards.

WHY CHOOSE REY FINANCE?

Open for global participants

Anyone may make use of Rey Finance. Rey Finance has the extra virtue of being entirely safe and transparent, allowing it to be utilized freely across borders. Technology will enable a financial revolution in the food business, making everyone more financially connected, empowered and enabled.

Free from corporate and government interference

Because there are no intermediary institutions or government participation in Rey Finance transactions, transaction costs are kept to a minimum. Furthermore, any transfer takes place extremely rapidly, removing the inconvenient needs for authorization and waiting periods.

Blockchain compliant

Because Rey Finance is a Binance-compliant token, it can perform a few operations that all tokens can. In the future, we hope to connect our own blockchain.

Safe & Secure

Rey Finance is a safe and secure platform that has been audited by CertiK and our technical staff is always working to improve the system's security to assure the platform's safety.

FEATURES OF REY FINANCE

Wealth Reimagined

We believe in bridging the gap between what investors require and the distance they must travel to get it. So, starting with Rey Finance, we've entered the blockchain network to provide improved options.

Imagine Possibilities

We broaden perceptions and question the established quo. Tokens that pay dividends while also giving you additional power and control. Please cast your vote on what should happen next.

Less Risk, More Reward

Rey Finance is a Token with the Highest Reflection. Earn Rewards by staking. It is not necessary to claim REY because it is instantly supplied to your wallet.

Redefining Investment Culture

Detailed analytics, pattern detection, and a consistent risk tolerance are all part of the classic investment process. Rey Finance eliminates the need for critical thinking and complex decision-making. Instead, we use a hybrid approach to Innovation to develop our ideas.

Expect opportunity

Our basic beliefs place a premium on long-term thinking. Our primary emphasis is on expanding and creating options for our investment community. Our dedication to excellence is better highlighted by thinking along the lines of consistency and developing superior investment products.

Security

Our key goals are safety, security, and trustworthiness. The multiple benefits provided by blockchain and smart contracts make it increasingly difficult to revert to failed methods. We survive by staying on the cutting edge of technical security.
